How to feed for Eggs. 25c. in stamps. A copy of "The Cove Dale Poultry Yard," containing illus. Catalogue and Price List of 50 varieties FREE.

A. M. LANG, Box 846, Cincinnati, O.

TERRENCE V. POWDERLY.

Terence V. Powderly, general master workman of the knights of labor—a machinest by trade—is thirty-eight years of age, and a native of Pennsylvania. He is opposed to strikes and boycotting, and has gained the respect of all classes, having shown himself to the public—through his open letters to the daily press of the country—to be an earnest student of capital and labor. As general master workman of the knights of labor, he commands the attention and confidence of the working men throughout the country. The leading political principles of the knights of labor are embodied in the state ownership of railroads, telegraph, and the like means of transporting intelligence, passengers and freight; a graduated income tax; that public lands be reserved for actual settlers, and all lands now held for speculative purposes to be taxed to their full value, and the doing away with banks of issue.

Preservation of Eggs.

Australian eggs are preserved in the following simple manner: The vessels in which the eggs are to be placed are glass jars with patent stoppers, vulcanized India-rubber joints making them perfectly air tight. As soon as the eggs have been collected, the jars are stood in hot water for some time, and left until the air in them has become thoroughly warm and rarefied. The jars having been heated, the eggs are wrapped up in paper to prevent them knocking together, and placed in a warm receptacle, their pointed ends being uppermost. The jars are immediately closed up, and then, and not until then, are removed from the hot water. It is said that if this process is skillfully carried out, the eggs will be as fit for the breakfast table as the day they were laid, many months after they were put in the jars. The great secret of success in carrying out this method is, no doubt, to thoroughly heat the air in the jars. The eggs will stand a better chance of keeping, if the paper in which they are packed is previously baked and used warm. Patent stoppered jars are not absolutely necessary, any stopper answering which effectually excludes the air. At the late Birmingham, Eng., cattle show, prizes were offered for the best dozen of preserved eggs, and they were given, as was the case the year previous, to those preserved in simple lime and water, or packed in dry salt. Samples were shown covered with melted suet, beeswax, oil, or lard, and all these were good. But strange to say, one exhibit which had been rubbed over with vaseline as soon as laid was the worst of all. All the eggs were putrid.

WORSE THAN SMALL-POX.

A Great Danger Which Menaces an Unsuspicious Public.

The Brompton Hospital for consumptives, in London, reports that over fifty people out of every hundred consumptives, are victims of constipated or inactive kidneys.

Consumption is one of our national diseases, and the above report goes to prove what has often been said in our columns during the last eight years, that kidney troubles are not only the cause of more than half the cases of consumption, but of ninety out of every hundred other common diseases. They who have aken this position, made their claims after elaborate investigation, and their proof that they have discovered a specific for the terrible and stealthy kidney diseases, which have become so prevalent among us, is wise and convincing.

We have recently received from them a fresh supply of their wonderful advertising. They have challenged the medical profession and science to investigate. They have investigated and those who are frank have admitted the truth of their statements. They claim that ninety per cent of diseases come originally from inactive kidneys; that these inactive kidneys allow the blood to become filled with uric acid poison; that this uric acid poison in the blood carries disease through every organ.

There is enough uric acid developed in the system within twenty-four hours to kill half a dozen men.

This being a scientific fact, it requires only ordinary wisdom to see the effect inactive kidneys must have upon the system.

If this poison is not removed, it ruins every organ. If the bowels, stomach or liver become inactive, we know it at once, but other organs help them out. If the kidneys become constipated and dormant, the warning comes later on, and often when it is too late, because the effects are remote from the kidneys and those organs are not suspected to be out of order.

Organs that are weak and diseased are unable to resist the attacks of this poison, and the disease often takes the form of and is treated as a local affliction, when in reality the real cause of the trouble was inactive kidneys.

Too many medical men of the present day hold what was a fact twenty years ago, that kidney disease is incurable, according to the medicines authorized by their code. Hence, they ignore the original cause of disease itself, and give their attention to useless treating of local effects.

They dose the patient with quinine, morphine, or with salts and other physics, hoping that thus nature may cure the disease, while the kidneys continue to waste away with inflammation, ulceration and decay, and the victim eventually perishes.

The same quantity of blood that passes through the heart, passes through the kidneys. If the kidneys are diseased, the blood soaks up this disease and takes it all through the system. Hence it is that the claim is made that Warner's safe cure, the only known specific for kidney diseases, which is sold so largely by all dealers, cures 90 per cent. of human ailments, because it, and it alone, is able to maintain the natural activity of the kidneys, and to neutralize and remove the uric acid, or kidney poison, as fast as it is formed.

If this acid is not removed, there is inactivity of the kidneys, and there will be produced in the system paralysis, apoplexy, dyspepsia, consumption, heart disease, headaches, rheumatism, pneumonia, impotency, and all the nameless diseases of delicate women. If the poisonous matter is separated from the blood, as fast as it is formed, these diseases, in a majority of cases, would not exist.

They may regard this article as an advertisement and refuse to believe it, but that is a matter over which we have no control. Careful investigation and science itself are proving beyond a doubt that this organ is, in fact, more important than any other in the system as a health regulator, and as such should be closely watched, for the least sign of disordered action.

It only requires a particle of small-pox virus to produce that vile disease, and the poisonous matter from the kidneys, passing all through the system and becoming lodged in different weak points, is equally destructive, although more disguised.

If it were possible for us to see into the kidneys, and how quickly the blood passing through them goes to the heart and lungs and other parts of the system, carrying this deadly virus with it, all would believe without hesitation what has so often been stated in advertisements in these columns, that the kidneys are the most important organs in the body.

Wickedness of Licensing Rum-Selling.

A license is the rum-seller's justification and temperance delusion.

A license is the rum-seller's fort and a temperance humbug.

A license sanctions the crime and gilds the saloon.

A license, while pretending to regulate the saloon, apologizes for the crime that it produces.

A license calls for a bribe and corrupts the bribe-taker.

A license is a legal sanction for crime for a money consideration, which costs ten times the amount received to take care of the consequences of the crime.

A license is murder sanctioned by law.

A license is a murderous war on the people, sanctioned by the people themselves.

A license is murder by wholesale with a provision that the murder shal be done with slow poison only.

A license restricting the number of saloons does not restrict the amount of poison to be drank. A concentration or monopoly may, and often does, offer superior attractions to drink oftener.

A license to furnish intoxicating liquid poison to our sons, brothers and fathers, for a money consideration, is a glowing evidence of our present high civilization, our Christian civilization. Don't you see the point, voter?

High or low license is a premium to be paid for the privilege or commission to commit crime.

High or low license is a bribe to our selfishness and a sanction of our criminal propensities.

A license to commit crime as a means of regulating it: this is the last method by which pretended advanced weak-kneed politicians and anti-saloon Republicans are trying to coddle this upas-tree of intemperance with a justification of the rum-sellers' criminality, with the sanction of a bribe, and, besides, the monopoly of the business of making drunkards. Did the world ever know of a more stupid and wicked attempt to bolster up a criminal business? A sanction of crime to be boasted of as a means of regulating it is all bosh and nonsense, and only acts as a delusive snare to entrap unthinking temperance people who have not the moral courage to demand and enforce prohibition.—*Demorest's Monthly.*

Spring Farm Cleaning.

While the wife cleans the house, let the husband clean the farm. If vegetable matters is left about the yard, its rapid decay during the damp, warm weather of Spring and Summer, will poison the air and affect the health of the family. If left about the barn, lots and fields, it will have a like influence on the farm animals. Hogs are doubly liable to be injured, for they not only breathe the fouled air, but nest in such litter. Farm cleaning will save loss from disease. The litter has great value as a fertilizer when properly applied. The intelligent use of this manure ensures better crops, and the farm is capable of a more thorough cultivation. And then how much appearances are improved. Make a bonfire of pieces of wood, brush, stumps, etc., not fit for fuel, and give the charcoal to the swine and the ashes to the fruit trees. Remember this work is not complete until those stumps and stones are removed which can be taken out with a reasonable amount of labor; until the trees about the house and in the orchard are pruned; until the old growth is taken from raspberries gooseberries, currents, etc., until the underbrush is cleared out of the wood-lot; until all the ditches are opened and pools are drained; in short, until the farm is clean and neat. Conveniently enough, nearly all, or all of this work, can be done before the Spring plowing is begun.—*American Agriculturist.*

"The use of Tobacco Prohibited in this house," 5 c., or 3 for 10 cts.

One of each of the above six placards for 25c

Address,

AGENTS WANTED for the MISSOURI STEAM Washer

Active, honest persons all over the country, with or without team.

JOHN C. EVANS, BOONVILLE, Mo., writes: "I stand up and affirm that a Washer saves more hard labor and money in a large family than any Reaper and Mower that ever was put on any farm with less than 100 acres in cultivation. If you still get up any instrument that will take so much labor off of men as this Washer takes off the women, and save as much money as it does and cost no more, I could sell one at every house, if they had to take the feathers from under their wife and babies to pay for it."

JOHN R. DODGE, JR., jeweler, WOMACK, Ia., writes: "I do not what I think of the Washer. . . ought last summer. Ist. It is the best machine ever invented by man. 2d. We have just as good dinners on Monday as on any other day. 3d. If you can't, you can not buy ours for $1000."

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents big money. Write for particulars.

J. WORTH, 1710 Franklin Ave., St. Louis, Mo.
